ENGINEERING SPECIFICATIONS

Installation

Designed for collectors mounted in portrait orientation only. Collectors tilt angle between 20° and 60° from horizontal. Upper support strut to be installed 20% of collector length from the upper short end. Lower support strut to be installed no less than 6 inches from the lower short end. The rear leg is to be no less than 70° and no more than 90° in respect to the collector.

Materials

Support Struts and legs shall be constructed of AISI 6063 T6 anodized aluminum with collector connection interfaces consisting of an integral channel

as to allow flexibility of collector position laterally. Mounting fasteners shall be constructed of AISI 304 stainless steel with all bolt assemblies including a mechanical fastener lock. Mounting shall allow collectors to be affixed without intrusion of the collectors casing.

Application

Mounting shall be adjustable as to allow collector tilt angles, from horizontal, between 20° and 60°. Mounting shall allow collectors to be installed in a portrait orientation allowing easy alignment of the collector headers.

SunEarth's policy of continuous product improvement may result in changes to specifications without notice. Please verify currency of specification.
